INSTRUCTIONS

1. Lay the canopy protector on top of the canopy.
2. Secure the protector with the corner straps.
3. Once the corner straps are secure, peel the Velcro strip and adhere it to the front of the canopy.
4. Install the side panels. It is helpful to have two people for this: one to hold up the panel and the other to zip it into place.
5. Install the rear panel.
6. Zip all the panels together.
7. Adhere the Velcro to the front struts.
8. Tighten the enclosure with the clips on the bottom.

Position the panels so that the Velcro strips are at the front inside, near the front struts.

You may need to adjust the knots higher to keep the enclosure tight.

After the initial installation, only the panels will need to be reinstalled if they are removed from the cart.
